Theories Of The Universe: From Babylonian Myth To Modern Science (Library Of Scientific Thought)

Synopsis

The theoretical physicist shares his latest thoughts on the nature of space and time in this anthology of selections from Princeton University Press. Along with eminent colleagues, Hawking extends theoretical frontiers by speculating on the big questions of modern cosmology.

Book Information

Paperback: 452 pages

Publisher: The Free Press (March 1, 1965)

Language: English

Customer Reviews

Want understand what Stephen Hawking and his colleagues are talking about, but have no idea about the history of cosmology? Then this is the book you're looking for. This collection of texts taken from writings by Plato, Copernicus, Galilei, Ptolomy, Einstein, Hubble and other theorists discuss what the universe is made of, how it works and (ultimately) what our place is in the Grand Scheme of Things, offering good insight into how our knowledge of the universe has developed over the last 40 centuries from Babylonian times to the 20th Century. As this book was originally published in 1957 and reprinted in 1965, the latest theories are not included. It is therefore not a book for mathematicians or physicists interested in learning the latest theories, but rather a book for those interested in a well-written, general introduction to the field of cosmology.
